Paste this code into your HTML-page and replace object stage parameter with your values. The following HTML-code supports MS Internet Explorer and Mozilla Firefox:

# Configuring the Gallery

An XML file is used to configure the gallery. By editing the XML file, you can add or remove gallery images as well as edit multiple appearance and behavior settings. The format of the XML file is described below.

Gallery settings are described in the **<settings></settings>** tag of the XML file as follows:
**<parameter name> parameter value **.

For example, the angle of an image is configured using the "imageAngle" tag:
**<imageAngle>**25**</imageAngle>**.

Tag **<item> </item>** contains information related to a particular image.

> **<item>**
> **<source>**1.jpg**</source>**
> **<description>**Image 1**</description>**
> **<link>**http://www.flash-gallery.com**</link>**
> **<target>**_blank**</target>**
> **</item>**

**source** – image file name
**description** – Image description
**link** – link to the web-page
**target** - controls where the new document will be displayed

# XML File Format

```
<gallery>
    <settings>
            <imagesFolder>images/</imagesFolder>
            <imageAngle>30</imageAngle>
