CREATED ON: 03/27/2002.

This file contains citations for all STDs in numeric order. Each STD represents a single Internet Standard technical specification, composed of one or more RFCs with Standard status.

STD citations in this file appear in the following format:

#### Title of STD. Author 1, Author 2, Author 3. Issue date.  
(Format: ASCII) (Obsoletes xxx) (Obsoleted by xxx) (Updates xxx)  
(Updated by xxx) (Also RFC####, ...)

For example:

0006 User Datagram Protocol. J. Postel. 28 August 1980. (Format: TXT=5896 bytes) (Also RFC0768)

Key to citations:

#### is the STD number.

Following the number are the title (terminated with a period), the author, or list of authors (terminated with a period), and the date (terminated with a period).

The format and length information follows in parentheses. It lists some combination of ASCII text (TXT), PostScript (PS), and/or Adobe (PDF), each followed by an equals sign and the number of bytes for that version. For example (Format: TXT=aaaaa, PS=bbbbbb bytes) shows that the ASCII text version is aaaaa bytes, and the PostScript version is bbbbbbb bytes.

Finally, the (Also RFC ##) phrase lists the RFC(s) that form this STD.

RFCs may be obtained using HTTP, FTP, or email. See the RFC Editor Web page <http://www.rfc-editor.org>
